ISO 13934-2: 2014 Specifies a procedure for the determination of the mother's tissues known as the consistent test. The whole one applies mainly to the tissue tissues, including the tissues that have stretching characteristics conferred by the presence of an elastic fiber and a mechanical or quomic treatment. It may be applicable to tissues produced by other techniques. It is not normally applicable to geothals, false fabrics, coated fabrics, tissue fabrics, and fabrics made with carbon fibers or polyolephin tape wires. The whole specifies the determination of the protenes in equilibrium with the standard atmosphere for rehearsal and tests in a state. The whole is limited to the use of testing with constant extension rate (CRE).
